

DESCRIPTION OF DOCUMENTATION FOR:

Keating (2017) Wind Turbines Impact on Housing Prices: Why is there Scholarly Disagreement?

The data management and analysis for the paper were conducted using R version 3.3.1 “Bug in Your Hair” using RStudio version 1.0.136 It has been written to run on a Windows or Mac operating system. In addition to the base R package, several packages are used. These can be seen at the top of the Rmd document loaded in the first code chunk.

The paper was knitted to pdf using the elsevier article format contained in the rarticles package. Knitting to pdf requires a L^AT_EX installation on your computer, though you will not need to write any L^AT_EX code directly.

The documentation is organized into three main directories (listed in order of importance for reproduction of results):

- Source code: Here you will find the Rmd file that reproduces the entire paper, along with all auxiliary files created in process of knitting the pdf.
- Processing and analysis: contains all the data that I used in my Rmd file. This data is in the form of an excel spreadsheet that contains the relevant information from all 15 studies.
- Literature: My paper did not require to me to import a data set. Instead I included all of the papers that I used to compile my own spreadsheet for my analysis.

To reproduce all results reported in paper:

Copy the Documentation folder to your computer. Make sure to leave the folder structurally intact. The code has relative paths to the data and supplementary code that assume the data is in this folder structure. The Documentation folder can be moved or renamed as necessary, but everything else must remain unchanged.

Open the Rmd file in the Source Code folder using R Studio. Make sure all required packages are installed. Run all code in the file. If the output format is changed to an R notebooks format, the chunks can be run one at a time to see individual results. Knit the file to elsevier article. (Knitting to other pdf formats should change only the formatting. You must have a L^AT_EX installation on your computer to do this.
